

Skin Joy Clinic

SKIN | HAIR | NAIL CLINIC

Hello there! 🎈 🧤

Goodbye, bump! You've just had your cyst removed at SkinJoyClinic. Now that the "balloon" is gone, let's make sure the space it left behind heals up perfectly.

🎮 The "Deep Clean" Recovery 🧖‍♀️

Because cysts are deeper in the skin, they need a little extra care:

- **Level 1: Dressing Duty** 🩹 Keep the area covered as instructed. This keeps bacteria out of the deep healing zone.
- **Level 2: The "No Squeeze" Zone** 🚫 Even if the area feels a little firm while healing, do NOT squeeze or press on it. This is internal healing at work!
- **Level 3: The Hygiene Hero** 🧼 Wash your hands before touching anywhere near the site. We want to keep this area "sterile" until it's fully closed.

🏆 **Reward:** A flat, bump-free, and comfortable skin surface!

🧠 Fun Fact!

Cysts are like little sacs that get filled with keratin (skin protein). Today, we didn't just empty the sac—we removed the whole "lining" to make sure it doesn't come back!

🛑 When to call for backup:

Cyst sites can occasionally fill with a little fluid. If you notice a sudden return of the bump, or if the area becomes very red and painful, call us!
